EDUCATION

University of Jordan

Bachelor of Science in Computer Engineering

- Cumulative GPA:** 3.4/4.0 (Rating: Very Good)

Amman, Jordan

Sep. 2021 – Feb. 2026

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Dart, Python, SQL, HTML, CSS, C++

Mobile Development: Flutter, Clean Architecture, State Management, BLoC.

Web Development: HTML5, CSS3, JavaScript (ES6+), React(learning), Next.js(learning)

Backend Development: Node.js, Express.js, REST APIs, JWT Authentication, Microservices, FastAPI (Python)

Databases: PostgreSQL, Prisma ORM, Relational Database Design

Tools & DevOps: Git, GitHub, Postman, Linux (Bash), VS Code

Other: AI Prompting, Prompt Engineering, OOP.

EXPERIENCE

Network & Infrastructure Intern

University of Jordan – Computer Center, Network & Infrastructure Department

Amman, Jordan

Jul. 2025 – Sep. 2025

- Gained hands-on exposure to enterprise IT infrastructure including campus-wide network systems and wireless solutions.
- Assisted in diagnosing and resolving network issues, bridging academic theory with real-world production environments serving thousands of daily users.

KEY PROJECTS

Silsila – Full Stack Mobile App | Flutter, Node.js, PostgreSQL, Python

Graduation Project | 2024–2026

- Co-engineered a full-stack B2B marketplace connecting retailers with suppliers (2-person team); achieved **Distinction Grade** for technical complexity.
- Personally owned the full technical stack: Flutter mobile app, Node.js REST API, PostgreSQL database, and Python AI microservice.
- Built a custom **Split-Cart** system in Node.js that automatically breaks a single customer order into per-vendor sub-orders.
- Implemented a **QR verification** flow for delivery confirmation and a **smart order-assignment** system that distributes deliveries intelligently to reduce time and effort.
- Added **route optimization** for delivery drivers to minimize travel distance and fuel cost.
- Resolved a critical concurrency bug using **SQL Transactions** in PostgreSQL, preventing double-booking when multiple users order the same item simultaneously.
- Built a **Python FastAPI** microservice for AI-powered demand forecasting for suppliers, recommending restocking levels to retailers based on historical sales patterns.

Frontend Mentor UI Components | HTML, CSS, JavaScript

2026

- Built 5 design-to-code UI components from professional specs: a social links profile, QR code card, blog preview card, interactive FAQ accordion, and a sign-up form with client-side validation.
- Practiced translating pixel-perfect designs into clean, responsive HTML/CSS with JavaScript interactivity; all components are live on GitHub Pages.

KEY ACHIEVEMENTS

2nd Place – Jordan Semiconductor Design Competition (JoSDC'23)

2024

- Designed an out-of-order superscalar processor with a correlated branch predictor and pipelined arithmetic unit in SystemVerilog.
- Competed against engineering teams across Jordan; demonstrated advanced knowledge in processor architecture and complex logic design.

Distinction Grade – Graduation Project, University of Jordan

2026

- Awarded the highest grade for Silsila, recognized for the full-stack architectural complexity and AI integration.

CERTIFICATIONS

Cursor & Claude Code – Professional AI Setup

Instructor: Steve Kinney

Frontend Masters

Practical Prompt Engineering

Instructor: Sabrina Goldfarb

Frontend Masters

Getting Started with JavaScript, v3

Instructor: Web Dev Simplified

Frontend Masters

The Last Algorithms Course You'll Need

Instructor: ThePrimeagen

Frontend Masters

RELEVANT COURSEWORK

Data Structures & Algorithms, Database Systems (SQL), Operating Systems, Object-Oriented Programming, Java, C++, Python
